VAIBHAV MARVANIYA

SENIOR UNITY DEVELOPER | UNITY / C# | MOBILE GAME ENGINEERING

Ahmedabad, Gujarat, India | +91 7405957677 | vaibhav.mv76@gmail.com
Portfolio: vaibhav-marvaniya.github.io | LinkedIn: linkedin.com/in/vaibhav-mv

PROFESSIONAL SUMMARY

Senior Unity Developer with 9+ years of hands-on Unity/C# mobile game development. Independently developed the original Hyper Hostess game (the subsequently updated published title has reached 10M+ Google Play downloads) and consolidated five standalone Unity games into one application with AssetBundles. Skilled in gameplay systems, mobile performance engineering, C# architecture, multiplayer, LiveOps, and shipping Android/iOS games.

TECHNICAL SKILLS

Unity & C#: Unity 2D/3D, C#, OOP, SOLID, ScriptableObjects, gameplay AI, physics, reusable architecture, save/load, Unity Editor scripting

Performance & rendering: Unity Profiler, Memory Profiler, Frame Debugger, CPU/GC allocation reduction, pooling, GPU instancing, SRP Batcher, UI canvas/overdraw optimization

Assets & releases: AssetBundles, async loading, asset unloading, texture/audio compression, shader stripping, Android/iOS builds, crash/ANR investigation

Multiplayer & LiveOps: Photon, UNET, Socket.IO, online/LAN play, event systems, Remote Config, A/B testing, rewarded ads, Unity IAP

SDKs & tools: AdMob, Unity Ads, ironSource, AppLovin MAX, Firebase, Crashlytics, GameAnalytics, AppsFlyer, Adjust, Git, GitHub

PROFESSIONAL EXPERIENCE

Senior Unity Developer | Capermint Technologies | Jan 2026 - Present

- Contribute hands-on Unity/C# feature development and production support for confidential mobile game projects.
- Apply general Unity development practices including profiling, debugging, testing, and optimization to support reliable performance on mobile devices.
- Develop and maintain gameplay and user-interface functionality in collaboration with design and development teams.
- Support onboarding experience implementation and the integration of interactive user-interface components.
- Participate in code reviews, technical troubleshooting, and iterative improvement of existing game systems.
- Mentor 1 junior Unity developer while remaining directly involved in C# engineering and delivery.

Senior Unity Developer | GameYogi | Aug 2023 - Dec 2025

- Worked on Merge Glow - Fashion Design, Nut Sort - Color Match and Color Screw Unscrew and Match; the latter two titles each reached 50K+ downloads on Google Play.
- Refactored costly Update() logic into event-driven or timed execution, cached component lookups and removed avoidable LINQ/string allocations from performance-critical code.
- Used Unity profiling tools to reduce GC spikes, UI canvas rebuilds, overdraw and draw calls; created Unity Editor scripts to automate asset and texture checks; fixed crashes and ANRs using Firebase Crashlytics and Play Console.
- Built reusable C# gameplay foundations, save/load systems, rapid playable prototypes and production LiveOps features for casual/puzzle games.
- Integrated ad mediation, analytics, attribution and IAP SDKs including AdMob, Unity Ads, ironSource, AppLovin MAX, Firebase, GameAnalytics, AppsFlyer and Adjust.
- Mentored 4 Unity developers while remaining actively involved in programming, code reviews and release support.

Unity Developer | Funcell Games | Oct 2021 - Jul 2023

- Independently developed the original Hyper Hostess game from scratch using Unity/C#; the released game has reached 10M+ downloads on Google Play.
- Built initial gameplay for Daily Routine 3D and Pills Sort and the original Get Expelled game, before later studio-led iterations.
- Optimized CPU-heavy gameplay logic and asset/loading settings for mobile releases.
- Delivered rapid functional prototypes and integrated publisher requirements for Supersonic, Coda and Moonee.

Unity Developer | Ultragames | Jul 2020 - Sep 2021

- Developed real-money and non-real-money multiplayer card/Ludo experiences, including work on Ultra Ludo and Crazy Bar Brawl.
- Implemented online multiplayer features and session connectivity using Photon, UNET and Socket.IO across selected projects.
- Contributed to AR/hypercasual prototypes and Android/iOS game builds, including mobile asset-size and loading optimizations.

Unity Developer | Dweek Studios | Jan 2019 - Jul 2020

- Consolidated 5 standalone Unity games into one application using AssetBundles, reducing total app size and simplifying asset delivery.
- Developed educational gameplay and progression systems for BubbleBud Kids: Learning Games and My Eduverse.
- Investigated crashes/ANRs, supported Google Play submissions and live updates, and contributed to debugging and release preparation.

Junior Unity Developer | iDivineCreation | May 2017 - Jan 2019

- Developed gameplay, controllers, UI and progression for Mini Shooters, Modern Force Multiplayer Online and Cars Combat.
- Implemented online/LAN features using Photon and UNET, and supported Android profiling, QA and release fixes.

SELECTED PROJECTS

Hyper Hostess (Google Play) | Merge Glow - Fashion Design (Google Play)
Nut Sort - Color Match (Google Play) | Color Screw Unscrew and Match (Google Play)

EDUCATION

Bachelor of Engineering, Computer Engineering
SAL Institute of Technology & Engineering Research, Ahmedabad | 2012 - 2016
